Specific applications binpod

Binpod® is a patented recycled PEHD device, its perforations allow optimal distribution of treated air inside the container and its protective bars segmented avoid obstruction by the bags. Binpod® works with Gelactiv® bar, polymeric matrix containing powerful active neutralizing agents. Binpod® requires no battery or pump attaches easily with 2 rivets 12.5 mm minimum length (without washer).

Specific applications GELACTIV®

Gelactiv® CE is a polymeric matrix for diffusing active inhibitors to counteract smelly soft structures such as H2S, mercaptans, ...
As gel plate reinforced by a metal frame to hang it on anywhere, Gelactiv® CE treats odors from urban waste stored in all types of containers, buried, semi-buried and without constraint. Economic and efficient.

BIOTHYS™
OLFACTIVE SILENCE™

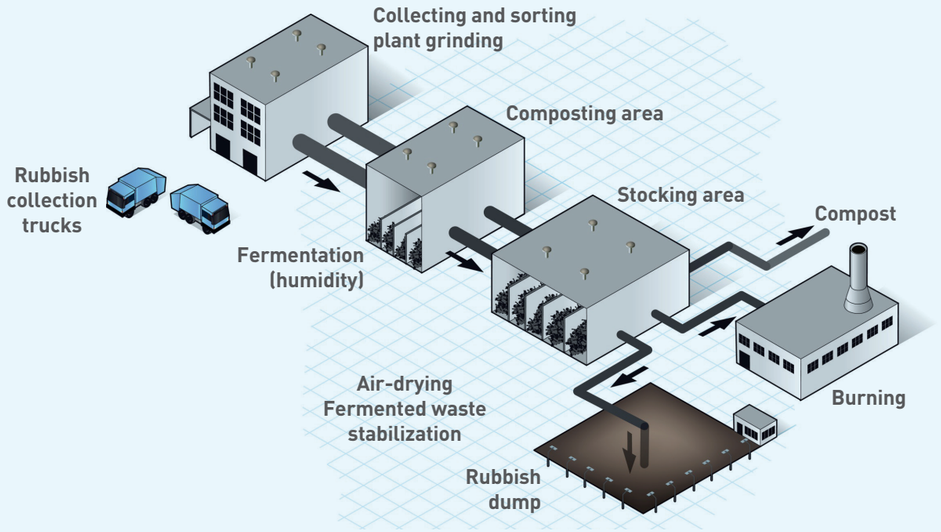
OLFACTORY POLLUTIONS

Your solution against bad smell

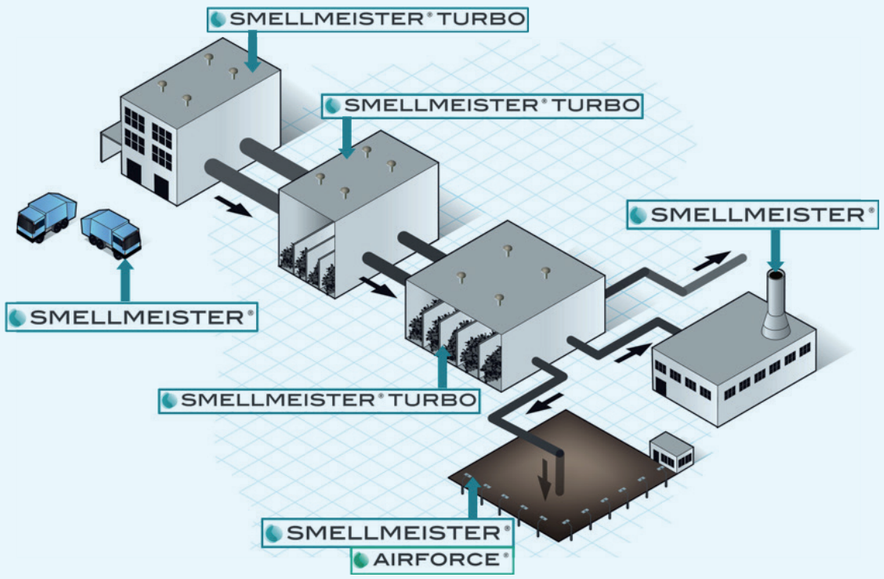
Antecipate the bad smells treatment with technologies as easy to use as efficient.

BIOTHYS™ successfully treats waste deposit sites, waste storage, garbage bins, trucks and many more.
Our solutions range from the treatment of small household waste bins to large waste disposal sites.

Olfactory pollutions present all through the waste treatment



Biothys solutions



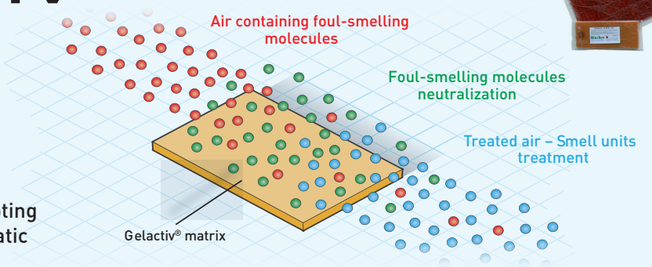
The Gelactiv® technology

GELACTIV®

A polymeric matrix plate releases the active agents.
Those active compounds will react with the foul-smelling molecules.

This treatment technology allows :
- Several months of treatment
- Targeted or global treatment by adapting the active agents to the site problematic

Gelactiv® plates



Specific application AirForce®

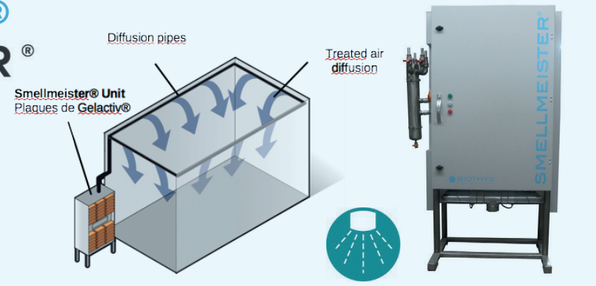
AIRFORCE®

The AirForce® device holds up to 2 Gelactiv®-plates. Thanks to the air flows present on site, the active agents are diffused all around the area to be treated. This device allows a noiseless 24hr/day treatment without restraint implementation. Moreover, this system is suitable for each site configuration by amount adaptation.

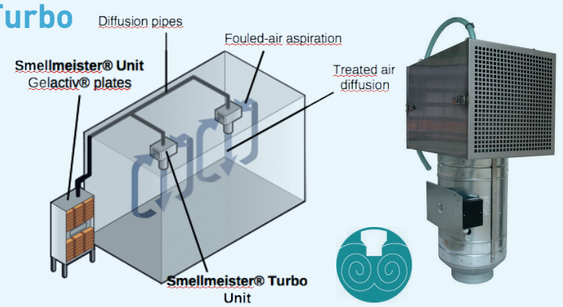
Specific application Smellmeister®

SMELLMEISTER®

The Smellmeister® Turbo device is used to treat closed or half-closed spaces without sufficient natural airflows to allow an optimal active agents diffusion.
This device assures a continuous gaseous phases homogenization and allows to faster achieve the neutralization point.



Specific application Smellmeister® Turbo

SMELLMEISTER® TURBO


The Smellmeister® Turbo device is used to treat closed or half-closed spaces without sufficient natural airflows to allow an optimal active agents diffusion.
This device assures a continuous gaseous phases homogenization and allows to faster achieve the neutralization point.
